PRODUCT DATA SHEET

Membrane Management Tools

Overview

The RELCO® End Cap Remover is a powered tool designed to safely and efficiently remove end caps from membrane filtration vessels. The system reduces manual effort and minimizes the risk of damage to vessel housings during maintenance and membrane changeout.

Product Capabilities

- Powered tool for removal of filtration system end caps
- Designed for 8" vessel housings
- Reduces manual labor and improves maintenance efficiency
- Supports safe and repeatable end cap removal

Applications

- Removal of end caps from membrane filtration vessels
- Maintenance and membrane replacement operations
- Facilities requiring improved safety and reduced manual effort during service

Key Features

- Powered operation using 18-volt system
- Secure engagement with end cap to reduce removal risk
- Non-destructive removal process to protect vessel integrity
- Compact and portable design for on-site use
- Stainless steel construction for durability in industrial environments
- Eliminates need for manual impact tools (e.g., slide hammers)

Components & Options

- Portable tool assembly
- Integrated engagement and safety mechanism
- Designed for compatibility with standard vessel configurations

Related Equipment

- RELCO® Dairy Filtration Systems
- RELCO® Membrane Management Tools

Technical Specifications

- Power source: 18-volt powered operation
- Compatibility: Designed for 8" membrane vessel housings
- Construction: Stainless steel
